

Runway 4R-22L Closed

Effective Monday May 18th through approximately July 13th (about 8 weeks) Runway 4R-22L will be closed for re-construction. This project will re-pave the entire runway and remove and replace all runway centerline and TDZ base cans and fixtures. For advanced drivers additional caution must be used at the 10C-28C and 10L-28R Intersections. Even though Runway 4R-22L is closed, those runways will be open during the day and most nights. Work behind the 28C and 28R approaches will be restricted to west flow conditions ONLY. Always confirm with Ops on proper procedures for entering this area.

Use extreme caution when driving on the runway as open excavations WILL exist due to pavement patch repairs and light base can removals. All excavations will be protected with low profile barricades.
